

!Locker

PRODUCT GUIDE

Your private vault, on your computer and your phone.

Keep accounts and passwords, card and bank details, documents and private notes in one encrypted place, locked with a key only you know. Open it with your fingerprint, find anything in an instant, and have the same vault everywhere.

Windows, Android and iPhone

Encrypted with your own key

Free 7-day trial

One licence, three devices

AT A GLANCE

One private place for everything you must not lose, **and must not share.**

!Locker keeps your passwords, card and account numbers, PINs, documents and notes in a vault that is encrypted with a key only you hold, before anything is stored. Jesora Labs cannot read your records, and neither can anyone else. The same vault is on your Windows computer and on your Android phone or iPhone.

Encrypted with your key

Every record is encrypted on your device with a key only you know, before it is saved or sent anywhere.

Any kind of record

A title and the fields you need: user name, password, PIN, card or account number, website, notes. Add as many as you like.

Find anything fast

Search titles, field names and values at once, and see only the records that match.

Secrets stay hidden

Passwords and PINs stay hidden until you show them, and copied values are cleared from the clipboard after 30 seconds.

Strong passwords in a tap

Create a long, random password for a new record without leaving the screen.

One licence, all devices

!Locker Pro covers one computer and two phones, with the same account on all of them.

Read-only is never locked. Without !Locker Pro you can always open, search and copy your records. Adding, changing and deleting need the free 7-day trial or !Locker Pro.

— ANDROID AND IPHONE

Calm, clear and quick on a small screen.

Sign in with your password or your fingerprint or face. Your vault opens to a clear overview, with records grouped by letter, one-tap Copy, Edit and Delete on every record, and a search box that is always one tap away.

Sign in, with biometric sign-in

Records with Copy, Edit and Delete on each card

A record, secrets hidden

Sign in

Use your !Locker user name and password, or turn on biometric sign-in under Settings to open your vault with a touch.

Your vault at a glance

See how many records and fields you have and how well your vault is secured. Each record is a card with its fields, and **Copy, Edit and Delete** right under it: nothing to open first. Swipe a card right to edit, left to delete.

A record's details

Every field of a record on one screen. Secrets show as dots until you tap the eye; one tap copies a value.

WINDOWS

The same vault, **at full size.**

!Locker for Desktop shows your records in a roomy window, with the same search, the same hidden secrets and the same encryption. Sign in with the same account and your records are already there.

The records list: search at the top, records grouped alphabetically, and your vault's status at a glance.

A record's details: each field with its own Show and Copy buttons.

— ADDING AND EDITING

A title, a few fields, **saved encrypted.**

Records have a title and as many fields as you need. Suggestions save typing, and every record is encrypted with your key the moment you save it.

New record

Give the record a title, then add the details you want to keep safe.

Title
? For example: Gmail, HDFC Bank, Net...

Fields
A name and a value for each detail: user names, passwords, card or account numbers, notes.

Adding a record on the phone

Add a record

- 1 Set your encryption key under **Settings** the first time, and keep it somewhere safe.
- 2 Tap **New record** and give it a title, for example Gmail or HDFC Bank.
- 3 Fill in the suggested fields, or add your own: Email, Website, PIN, Account number, Notes.
- 4 For a password, tap the sparkle to create a strong one.
- 5 Tap **Save record**. It is encrypted and saved.

Edit and delete

Tap **Edit** or **Delete** right on a record's card in the list, or swipe the card (right to edit, left to delete). Press and hold a card, or tap the dots, to copy any single field. Deleting asks first and cannot be undone.

!Locker Search your vault (Ctrl+F) Trial - 6 days 23 h left + New record Joji George

Records

- A Aadhaar Number
- A Amazon Email - Password
- G Gmail Username - Password - Recovery phone
- H HDFC Bank Customer ID - Password - Card PIN
- N Netflix Email - Password
- P Passport Number - Expires - Notes
- V Visa card Card number - CVV - Expiry
- W Encrypted with your key - Local mode

Edit record
Change the title or any field. Remove a field with its - button. Your changes are encrypted with your key when you save.

Title
Gmail

Fields
A name and a value for each detail: user names, passwords, card or account numbers, notes.

NAME	VALUE
Username	joji.george@gmail.com
Password	Tr0ub4dor&3
Recovery phone	+91 99999 00000

+ Add field + Username + Password + Email + Website + PIN + Account number + Notes

Saved encrypted with your key. Only you can read it.

Cancel Save record

Editing a record on the computer.

— SECURITY

Built so that **nobody but you** can read your vault.

Your key never leaves your devices. What is stored on the !Locker server is encrypted text that only your key can open.

PROTECTION	HOW IT WORKS
Your own encryption key	You choose it under Settings. Titles, field names and values are encrypted with it on your device before they are saved or sent. Changing the key re-encrypts every record.
Nothing readable on the server	The server holds your account and your encrypted records. It never sees your key or your plain text, so it cannot read or recover your records.
Sign-in	Your account password is stored only as a modern hash. Sign-in, sign-up and password reset are rate-limited. Biometric sign-in is optional and stays on the device.
Secrets hidden	Passwords and PINs show as dots until you show them. Copied values are cleared from the clipboard after 30 seconds.
Only your records	The server applies changes only to the account that is signed in. Another account cannot change or delete your records.
You are in control	Delete your account under Profile and your records are removed for good.

Write your key down. If you forget your encryption key, nobody can recover your records, not even Jesora Labs. That is what keeps them private.

Desktop sign-in, and the settings where you set the key, biometric sign-in and appearance.

— LICENCE

Try it free. Keep it for a year at a time.

Every new account can try everything for 7 days. After that your records stay readable, and adding or changing them needs !Locker Pro: one licence for one computer and two phones.

PLAN	DETAILS
Free trial	7 days, everything included. One trial per e-mail address.
!Locker Pro	₹499 a year in India, US\$24 a year elsewhere. Renews yearly until you cancel, or pay once for a single year on the website.
Devices	1 computer + 2 phones on one licence. You can move a licence to another device.
Without Pro	Open, search and copy your records. Adding, changing and deleting are switched off.

Where you can buy

- ✓ **Android:** subscribe in the app with Google Play.
- ✓ **iPhone:** subscribe in the app with the App Store.
- ✓ **Windows and the website:** pay by card or UPI with Razorpay in India, or with PayPal from abroad.

It is **one licence whichever way you pay**: sign in with the same e-mail address on every device and !Locker Pro is there. The stores show their own price in your currency.

Managing your subscription

A subscription bought in Google Play or the App Store is managed there (Google Play > Subscriptions, or Settings > Apple ID > Subscriptions on the iPhone), and refunds go through that store. One bought on the website is managed from **Manage subscription** in the app or on the computer. Under the refund policy, payments made in error are refunded; valid purchases are not, which is why every feature can be tried free for 7 days first.

!Locker Pro in the app: trial, subscribe, restore purchases

— GETTING STARTED

Ready in a few minutes.

On your phone

- 1 Install **!Locker** from Google Play or the App Store.
- 2 Create an account, or sign in if you already have one.
- 3 Under **Settings**, set your encryption key and write it down.
- 4 Tap **New record** and add your first one.
- 5 Turn on biometric sign-in to open your vault with a touch.
- 6 Choose **!Locker Pro** in the menu to start the free trial.

On your computer

- 1 Download the Windows installer from **locker.jesoralabs.com** and run it. No administrator rights are needed.
- 2 Start !Locker from its Start menu or desktop shortcut and sign in with the same account, in Server mode.
- 3 Enter your encryption key once. Your records appear.
- 4 Open **License** in the side bar and sign in with your e-mail to use your trial or !Locker Pro.

Requirements

- ✓ Windows 10 or later, 64-bit
- ✓ Android phone or iPhone
- ✓ An internet connection to sync (your records stay readable offline on the device)

Your records and settings are kept in your user profile on the computer, so upgrading or uninstalling !Locker never removes them. Always start !Locker from its shortcuts.
